Office Action Summary

Art Unit: 2862

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 8,9 and 16 remain rejected under 35 U.S.C. 103(a) as being unpatentable over Foxworthy in view of Daetz et al, both of record, for the reasons set forth in the previous Office Action.

3. Applicant's arguments filed 6/22/01 have been fully considered but they are not persuasive. In substituting Hall effect sensors for the reed switch sensors in the device of Foxworthy, one skilled in the art would not use the oscillatory system.

4. Claim 17 is allowed.
